EXPERIENCE

BENEFITS ANALYST

National Health insurance Fund

Nairobi, Upperhill

May 2023 – July 2023

- Assessed employee benefits plans and recommended changes to ensure compliance with regulations.
- Maintained accurate and up to date records pertaining benefits provision, schemes such as EDUafya, WIBA, Group life and Last expense which required strict data monitoring and scheduling.
- Utilizes analytical skillset to analyze claims data from multiple sources while sorting them with utmost scrutiny in order to identify areas of improvement within the department.
- Ensured proper completion of all required criteria for every individual claim before processing for payment thereby, communicating to claimants about any discrepancy in their claim.
- Making a follow-up on outstanding unpaid claims, correcting any errors that might have been made during processing through analysis of records review of contractual agreement.
- Guided employees on claim coverage procedures, documentation requirements and answering any concern they present pertaining to their contract.
- Evaluated eligibility criteria for existing claims changing legal requirements in order to maintain compliance standards.

CERTIFICATIONS

MySQL and R programming – Alison Courses(ongoing): I am currently advancing my data analytics skills through rigorous MySQL and R programming courses as I had previous encounter in my university and high school studies

Python programming – ALX Africa – my ongoing training at ALX Africa is providing me with practical skills and theoretical knowledge necessary to tackle complex Data Science problems using Python. The comprehensive program has equipped me with deep understanding of various Python Libraries such as Pandas, Numpy, Matplotlib among others. These are widely applicable to problem solving using the computer software.

PROJECTS

Stock Portfolio Analysis (Python): Python application for analyzing stock portfolios and general data analytics. Utilizing data from financial APIs to provide estimations, prediction forecasting and generating reports. It will incorporate Ms Access and Excel for final results presentations. The codes and flow charts are available on my GitHub repository.

Claim reserving for non-life insurance using the Bornhuetter- Fergusson and Chain Ladder models: This is my research paper for final year project which aims to analyze weekend and holidays which are often not accounted for by insurance companies while estimating required reserves. The research has put my mentioned skills to practice thereby improving them and acquiring more skills and knowledge.
